## Summary

I want to use my skills and abilities to contribute to universal prosperity. I also enjoy finding better ways to do things.

---

## Experience

### **Software Developer at University of Washington School of Law**

April 2016 - Present

Utilizes specialized knowledge of software development systems to create and maintain custom web and windows applications for the School of Law. This position also develops and maintains SQL databases and stored procedures.

#### Duties

- Develop and maintain data architecture and integration infrastructure.
- Design, create and maintain data-driven custom web pages and windows applications.
- Create new SQL Server databases, tables, or columns. Create and maintain SQL Server stored procedures or functions used by web and other database applications as needed. Manage SQL security roles and permissions as needed.
- Develop features and templates for Umbraco web content management system.
- Integrate new technologies with UW or vendor provided solutions. Provide customization programming support.
- Assume leadership on assigned projects. Schedule meetings with appropriate users and keep information staff apprised of project progress and challenges.

### **Web Developer at Applied Systems**

March 2013 - December 2014 (1 year 10 months)

Assisted in the layout, coding, testing and maintenance of the organization's websites, intranet and other digital properties.

- Maintained and updated the corporate websites, microsities, campaign email templates and landing pages, intranet and other web properties
- Took design direction for new web properties - ensuring all elements of the user experience (interface design, navigation, IA, etc.) met objectives and user needs

- Contributed to the technical development of all new web properties - performing front-end development to deliver the required functionality
- Tested and fully QA'ed all deliverables prior to launch
- Tracked and reported on website analytics (Google Analytics)
- Supported the technical lead for the event management system and integration with web properties for event registration and management

### **Web Developer**

November 2008 - January 2010 (1 year 3 months)

- Lead Web Developer
- Worked primarily with WordPress powered websites
- Modified and integrated WordPress eCommerce plugins.

### **Technical Support Engineer at Morehouse College**

May 2009 - September 2009 (5 months)

- Provided solutions to technical problems for students, faculty and staff
- Set up new machines and related administrative tasks

### **Web Programmer**

June 2006 - August 2006 (3 months)

Modified and developed ASP.NET/C# Content Management System backend; coded standards-compliant XHTML web pages.

### **Program Testing Intern at Microsoft**

June 2005 - August 2005 (3 months)

Worked in Windows Mobile UI Testing group, writing test automation for Windows Mobile API tests.

---
